EXPERIENCE

Medical Staffing

Emergency Management Support

Preparing for anticipated and unanticipated scenarios is a critical part of Emergency Management (EM) and Continuity of Operations (COOP) for any medical facility. Cayuse subject matter experts provided crucial support to an Agency's Headquarters and regional commands to bolster their emergency preparedness operations and training via plans, policy consultation, training exercise design and evaluation and operational and technical support. Improved situational awareness allowed for better response during contingency situations such as severe weather, flooding, and wildfires.

Health Care IT

Various Study/Research and Medical Staff

Cayuse supplies a range of medical staff to a U.S. Government Medical Center, including specialty Medical Doctors and Study/Research coordinators at a 100% fill rate and retention over the last 5 years. Our personnel supported various medical studies during COVID, researched mitigations and effectivity of medications, with findings being published in medical journals to support the wider scientific communities combatting the pandemic.

Logistics

Occupational Health Services

Cayuse provides a Facility with a comprehensive occupational health program including necessary personnel, supervision, and supplies. A Medical Director, Audiologist, and four RNs are available 24 hours a day M-F and on an as-needed basis on weekends. Services include treatment physical and psychological needs; health education and medical surveillance; preventative care; and documentation and maintenance of employee wellness data using client-supplied software.

Billing and Coding

Affordable Care Act (ACA) State Health Exchanges

Cayuse implemented comprehensive software development and maintenance efforts to adapt a client platform and state-specific customizations for three state systems (Oregon, Washington, Idaho) in compliance with their state laws and regulations as well as meeting federal ACA compliance. Following the enactment of the Affordable Care Act, our client and the prime contractor, Accenture, developed a product for use by individual states to update or replace their existing Benefits Management System for federal and state benefits including Medicaid, SNAP, and TANF. The system managed online application intake as well as ongoing management including renewals of cases for individuals with public benefits. The enterprise web application handled multiple concurrent users across several locations.

Case Management

U.S. Health & Human Services, Indian Health Service

Cayuse provided a team of Document/Image Management personnel to assemble, scan, perform quality assessments and return Indian Health Service records. The IHS records were old and required significant care in handling and scanning. Cayuse performed the function flawlessly and continues periodically to support the IHS in this ongoing need.

Research

State Integrated Eligibility Program

Creating an innovative, single-application process enables vulnerable populations to access and manage critical social services programs, including Medicaid, Medicare, Child Support, WIC, and other Health & Human Services programs. Cayuse participated in the design, construction and testing of applications supporting eligibility enrollment and determination for a state's HHS programs. The Integrated Eligibility (IE) program provided a comprehensive process and integrated applications, case review and determination, and payments. Multiple channels streamlined enrollment, providing citizens with their choice of phone, web, mail, and fax and in-office interviews.

State Child Support Automation System

Automating human services helps to better support families in 58 counties of a western state. Cayuse supported the statewide Child Support automation system, integrating 49 child support agencies with development and system testing of the financials, reports, and forms portions of the custom application. Cayuse also participated in the first successful Go Live deployment in one county.
